

Audio/Visual System Operation:

All of the audio/visual equipment within the room can be controlled using the touch panel system. This provides a simple and tactile interface to control all your multimedia needs. Follow the menu system on the screen to operate the system. Here are a few pointers for using this setup:

- Do not be afraid to press the panel, it needs a firm touch to register.
- If the touch panel appears black with nothing on the display, it simply needs “awakened.” To do this, press the panel firmly and wait for the display to come on.
- Upon selecting the projection option, the system will automatically lower the screen and turn on the projector for you. The audio system will also power on when either projection or audio only is selected. No other remote control is necessary.
- When you are finished with the system please shut down the system by pressing the SYS POWER button and confirming on the following menu. **FAILURE TO DO THIS COULD CAUSE THE PROJECTOR TO BECOME UNRESPONSIVE.**
